	Water	Heat	Elec.	Sew.	
<p>One of the monumental buildings in Cumalikizik which is the most well-known among the five Kizik Villages at the east of Bursa and at the skirts of Uludağ, is the mosque located on the upper square of the settlement. It was determined that the mosque had a history of three hundred years and was built as a replacement for the first mosque in the village. The mosque that is a building located in east-west direction with a rectangular plan has wooden load-bearing system, a wooden ceiling, a hipped roof and wide wooden eaves. The walls of the mosque laid with rubble stone and bricks are plastered and painted. In the Cumalikizik Village which has a wooden porch and adorned with hand-carvings women may perform their prayers in the section allocated for their use in the mezzanine above the section allocated for the muezzin. The minaret of the mosque where there is a fountain at the east front built at the end of nineteenth century, was built in 1973-1973.</p>	X	X	X

It is inside the barrel vaulted niche with a width of 2,10 mts, depth of 1,60 mts and a height of 1,85 mts located under the double stairs at the east facade. The sides of the ornamental slab made of white marble with a width of 1,10 mts, a height of 0,53 mts and thickness of 0,12 mts, are plastered and the surface is wiped. The corners have round arches and on the inscription written in Ottoman Turkish with one line, the following is stated "It is the foundation of Sahhibül hayrat vel hasenat Zekiye Hatun. Year 1316 (1917)"

DETAILED DEFINITION	TECHNICAL INFORMATION			
	Water	Heat	Elec.	Sew.
<p>The small scale Turkish bath in Cumalikizik that lies in north to south direction which has a square plan and covered with a dome has two spaces. Tepidarium, caldarium, water reservoir and shaving sections of the Turkish bath are authentic whereas the frigidarium, furnace and toilets were added afterwards. The frigidarium is accessed through the door at the south east of the Turkish bath. There is no certain information on the date of construction of the Turkish bath which was restored in 1983. This Turkish bath heated with wood was serving to men four days a week and to women three days a week until thirty years ago however lost its function and became unserviceable within the course of time.</p> <p>The population of Cumalikizik decreased to 180 houses from 350 houses and thus the number of persons using the bath decreased and also the number of houses with baths having a water heater increased so this made it impossible to operate the Turkish bath. The building which once was used only for bathing of the brides and bridegrooms during the wedding ceremonies made in the village, stays idle for a very long time.</p>	ORIGINAL USAGE

The Historical Street Texture and Examples of Civil Architecture

Cumalıkızık Village is included in the mass village categories in the village categories.

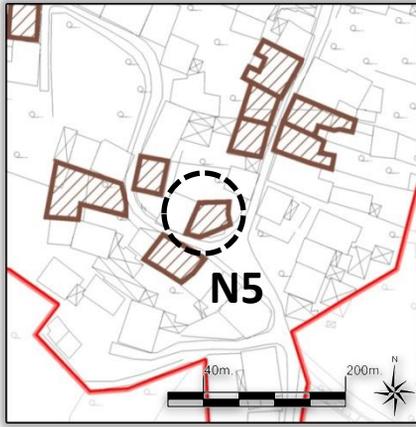

Houses are aligned one after another in the village alongside the roads having a width where only man and horse carts can pass. Here, the main objective is both not to destroy available agricultural lands and to get protection against the attacks coming from the surroundings and the wish to stay together. Two plans were applied in the houses of Cumalıkızık. Moreover, the houses are authentic in terms of roof typology.

There is an external courtyard with soil ground and coated with slates between the street and the house creating an enclaved environment by being encompassed with high walls. Outside life and the gate of the house can be achieved by passing through this external courtyard which is accessed through two-winged wooden doors. These courtyards where production activities carried out in the farm fields continue are surrounded with living environments taking place at different levels of the house and incorporate various functions as the kitchen, furnace, toilet, warehouse, poultry house and barn.

In the 2nd plan type, one can achieve not directly to the courtyard from the street but the living parts of the house. The living part is illuminated through a hole with a wooden grid but without any glasses. The stairs and warehouse and internal courtyard where there are places as a warehouse, a barn is located, is accessed through the Living Section.

DETAILED DEFINITION	TECHNICAL INFORMATION			
	Water	Heat	Elec.	Sew.
<p>A good collection concerning the XVIII.,XIX. and XX. Centuries is formed as a result of donations of various materials related with the history of the village by the villagers. Artifacts are exhibited in the hall with glass display windows leaned on the walls starting from the left side of the entry till the stairs and a display window at the middle. There are horse-carts, vinery "grape wringing basin", a mortar stone, a basin and a column capital are exhibited in the garden of the museum under the shelter. It is learned that the Ostotek Basin and the capital was brought from Karacak, a place 2 kms at the south of the village. There are housing appliances, illumination and heating devices, kitchenware, hunting materials, passenger vehicles and carrying vehicles exhibited in the musesum. It consists of a ground floor and a basement.</p>	ORIGINAL USAGE
